

Generating a Personal Geodatabase

These instructions are for ARCEditor users who need to know how to generate a Personal Geodatabase.

From ArcCatalog, go to the folder you want to contain the Personal Geodatabase. Right click on the folder and choose New Personal Geodatabase. Give the database a name.

Go to SDE and choose Database Connections. Right click on the feature you want to transfer; copy and paste them into the folder containing the Personal Geodatabase.
